

URINE TOXICOLOGY

HDx Labs proudly provides high-complexity Urine Drug testing, encompassing both qualitative and quantitative assessments for more than 22 drug classes. Our services begin with a preliminary 10-Panel test that includes adulteration detection screening. Additionally, we offer comprehensive toxicology panel confirmation testing.

Clinical Toxicology is the discipline within toxicology that is focused on the toxic effect and identification of certain drugs or chemicals that patients consume and helps physicians monitor and determine long term harmful drug interactions, confirm existing or future conditions or lead to therapy.

We offer a full menu of medical drug monitoring tests that provide unparalleled choice and flexibility for your specific monitoring needs.

The HDx Lab program:

- Assists clinicians in monitoring prescription drugs, non-prescription drugs and illicit drugs
- Provides clinicians and patients with fast and timely results
- Improves the quality of life of each patient by providing industry leading testing and instrumentation
- Easy to review results
- Scientific expertise from trusted personnel

HDx Labs offers a technical support hot-line. You will be able to contact certified scientists for a consultation about your test results.
